

The background features three large, thin, light-gray circles that overlap each other. One circle is on the left, another is in the center, and the third is on the right. They are all of the same size and are positioned such that they create a sense of depth and geometric pattern.

Are we
alone in the
universe?

No doubt, human civilization is an intelligent life form, but are we intelligent enough to recognize a human in the inhuman life form, living lightyears away from us? Is life on earth a discovery or invention?

All these questions are out of our domain. But the thing we know for sure is, we are not alone.

We are new to this universe, it seems reasonable to consider that, there might be other civilizations sprung forth elsewhere before us. It's equally logical to believe in the presence of civilizations older than ourselves out there, but could we be surrounded by older civilizations? one even far older than us. Or in the worst case are we the creation of some older civilization, keeping an eye on us, without our knowledge. If it's true, Space-Opera is not just a sci-fi. Sooner or later, we have to join it, to save us from dying in cold and cruel universe. As frightening it might seem, it's the horrible reality.

The presence of Kuiper belt can truly justify it. Kuiper belt is a circular disc extending from Neptune to the outer space. It's almost similar to the asteroid belt, present between Jupiter and Mars but is far larger – 20 times as wide and 20–200 times as massive than asteroid belt, it's still unknown, how big it is. Scientists even believe, the reason behind the elliptical orbits of planets could be due to gravitational force exerted by a massive object present in the Kuiper belt.

How do you think, it came into existence? A possible reason could be a mass destruction of planet caused due to an inter planetary fight. But, destruction of a single planet cannot generate a belt that big. So multiple planets must've been destroyed, Hinting "Planetary War". Sure, there could be different reasons, but until and unless we don't have any proof of our sole existence, we must be prepared for anything and everything.
